

## Implement Token Authentication using Django REST Framework

1. Open Project and Create Virtual Environment
2. `pip install -r requirements.txt`
3. Create User  
`python manage.py createsuperuser --username krishna --email krishna@gmail.com`
4. Generate tokens  
`python manage.py drf_create_token krishna`  
Generated token 749ddd5b6b256a39a1370ac68c360cf5c69b73e5 for user krishna
5. Apply token

### a. Postman

### b. Core Python

```
import requests
|
url = 'http://127.0.0.1:8000/api/v1'
headers = {'Authorization': 'Token 749ddd5b6b256a39a1370ac68c360cf5c69b73e5'}
r = requests.get(url, headers=headers)
print(r.text)
```
